General terms of sale and delivery

General Information

enz® usa inc. / enz® technik ag offers a large range of high quality pipe cleaning tools. Since 1985, through innovative designs, we have assisted the sewer and pipe cleaning industry to remain on the forefront of new and creative technologies. This ensures superior quality and gives you, the customer, a product that is efficient and durable. We are interested in being your Partner and helping you find the best solution for your problems. With our know-how and efforts we will accept any new challenges to help keep you on the forefront of the newest techniques available.

The enz® products

All enz® tools are calibrated to Customer specific Pump and Hose specifications with our own JetCalc® Software to optimize the performance of your tool.

The enz® rotating nozzles are remarkable for their tremendous cleaning efficiency, which is based on a worldwide patented Drive and Brake jets design which increases and decreases the rotational speed with every half rotation therefore limiting the rotational speed.

The resulting pressure vibrations essentially contribute to the disintegration of the deposits. We also carry a complete line of Rotating Chain Scrapers and Percussion Milling Cutters. Our ceramic orifice inserts ensure that enz® tools have an outstanding durability. Our products are covered by International patents.

Warranty / Safety / Liability

enz® Pipe and Channel Cleaning Tools are designed for highest possible performance. The materials and the heat treatment processes are selected for wear resistance and long life. enz® is applying the most up to date manufacturing and quality assurance methods.

The enz® organization is ISO 9001 and ISO 14001 compliant.

General Tool Warranty: enz® warrants the quality of all tools supplied for the duration of 12 months from date of purchase. The warranty is limited to the replacement of faulty parts or the in house repair of faulty tools. No warranty is accepted if tools are not used or maintained in strict compliance with the operating manual supplied by enz® .

Warranty on ceramic nozzles inserts: The orifice diameters of enz ceramic nozzles are warranted for wear for the duration of 5 years from the date of purchase when used with potable water. And 2 years from the date of purchase when used with recycled water. The warranty is limited to the free of charge exchange of worn inserts.

Warranty on Bulldog® nozzles: enz® warrants the internal mechanics of the Bulldog® nozzles for 1 year. No warranty on excessive wear of head or skid body due to prolonged or abusive use. Despite all due care, this documentation may contain errors. enz® technik ag and/or its Subsidiaries shall not be liable for any consequential damage. Technical modifications are reserved.

UC nozzles

enz® UC nozzles (with brake jet) are applied for industrial cleaning of heat exchangers and completely clogged tubes.

The cross jet, which directed to the front, cuts the material in the completely clogged pipe like a milling cutter. Simultaneously 2 radial jets of 60° - 90° clean the pipe wall. Through the same effect the removed material is flushed away. The cross jet causes a reaction force which, in many cases, makes it necessary to set the nozzle on a lance. The UC nozzles are available with or without thrust. Through all that, the UC nozzle has become a tool for universal use.

Applications

- For industrial cleaning of heat exchangers and completely clogged tubes

UC nozzles 43'000 psi

enz® UC13-3 nozzle cleans tubes – e.g. industrial heat exchangers and pipework. An intelligently short design means the same nozzle cleans both straight and tubes with bends and works at pressures up to 3000 bar (>43kpsi).

Its strength is enz cross jet technology making it excellent at unplugging. Add enz interchangeable sapphire inserts that convert pump power to water jets with greater water density (i.e. best at penetrating coatings); plus enz water brake that controls nozzle rotation and you're guaranteed highest surface impact and best cleaning.

Application:

- unblock hard, tough deposits of polymer, mineral, salts, or carbonized scales and residues
- polish to permit inspection, e.g. IRIS – or simple universal cleaning
- for manual or automated tube cleaning – single or multi-lance

URX nozzles

enz® URX nozzles are designed for customers seeking best clean and polish of the inside of smaller pipes and tubes, e.g. in heat exchangers. You can clean the tubes up to 2500 bar (36,000 psi). Two 90° jets and option front jet can clean the hardest of deposits. Constructed around enz® magnetic-brake and "low-leakage" design, rotation speed is controlled at a constant speed, this nozzle can remove more scale material faster and to highest standards.

UR nozzles

enz® UR nozzles are used to clean and in particular to polish the inside of smaller pipes and tubes, e.g. in heat exchangers. The enz® water-brake makes them spin at a constant speed. You can clean the tubes up to 1500 bar (22,000 psi). The 90° and 45° jets clean the hardest of deposits while pulling the nozzle into the tube and flushing the debris out.

Bulldog 37

The enz® Bulldog® 1000 bar rotating nozzle is specially designed for internal pipe cleaning up to 1000 bar. It is suitable for removing even the most stubborn deposits from the pipe walls. Thanks to its clever bearing system, the Bulldog® is virtually leak-free, resulting in higher efficiency. In addition, the forward-facing cross-jet cuts out the material from the blocked pipe like a milling cutter.

Applications

- Cleaning of heat exchangers in chemical and nuclear plants
- General industrial cleaning
- All in one nozzle: unplugging, polisher, universal

RGS, HRH, KBR, KBRV

The maximum power rotating nozzles enz® are most efficient in cleaning the inside wall of pipes with a pressure up to 1000 bar. They are most appropriate to remove harder deposits from the pipe walls and are for tube and pipe cleaning.

Applications

- Cleaning of heat exchangers in chemical and nuclear plants and for general industrial pipe cleaning

RGS nozzles

UB360

The enz® UB360® is specially designed for internal pipe cleaning up to 1000 bar. Thanks to its clever bearing system, like the Bulldog®, it's virtually leak-free, resulting in highest cleaning efficiency. It's intelligent, robust, extending frame is suitable for removing even the most stubborn deposits from pipe walls of 300mm (12") up to in excess 1200mm (48") diameter.

SC1500

The SC1500 is nozzle to clean and prepare surfaces. Due to the sapphire inserts with the flow straightener and the water break it has a very high water jet density. It can be run with little flow with two or four inserts up to 1500 bar | 22kpsi. The front cover helps to extend the lifetime of the nozzle.

MJ

The rotating enz® nozzle for cleaning surfaces is remarkable for its high efficiency. It outperforms conventional flat jet or round jet nozzles with a large margin.

Applications

- To remove deposits of concrete-slurry, cleaning of store fronts, steps, walls, traffic signboards etc.

Additional info

- Other thread types are available on request.
- The MJ4ST can accommodate water temperatures of up to 150°C.

ceramic nozzle inserts

These stainless steel ceramic inserts with flow straightener provide a very compact and aggressive water jet. The integrated jet stabilizer ensures a concentrated and powerful water jet density. The service life of a JetMax ceramic insert is much longer than that of hardened steel nozzles or other drilled inserts. Ceramic inserts are particularly suitable for use with recycled water.

Round jet

					 max
22.025		Ceramic insert Ø 0.4 - 0.16 inch	G 1/4"	0.022	7,250
22.04		Ceramic insert Ø 0,01 - 0,06 inch	M4	0.022	22,000

22.08F		Ceramic insert fan jet	M8	30°	0.022	7,250
22.10F		Ceramic insert fan jet	M10 x 1	30°	0.022	7,250

Sapphire nozzle inserts

These stainless steel sapphire inserts stand out from the competition and outperform other materials such as ceramic or steel. This is thanks to a very compact and aggressive water jet. The integrated jet stabilizer ensures a concentrated and powerful water jet density. The service life of a sapphire insert is much longer than that of hardened steel nozzles or other drilled inserts. Sapphire inserts are used primarily in the clean-water jetting industry. Sapphire inserts are less suitable for dirty water (recycled water).

Sapphire nozzle inserts

						
23.10ST		Sapphire Insert Ø 0.25 - 1.3 mm	M10	0.4 x 0.75	0.015	44,000

Steel nozzle inserts

These steel inserts stand out from the competition. These inserts have an excellent price-performance ratio. They are more durable than sapphire inserts, but they have a shorter service life. Unlike ceramic inserts, they are not suitable for use with recycled water. We commonly see them in the water jetting industry and recommend them for use in this industry, particularly with clean water.

Steel nozzle inserts

Steel nozzle inserts

				 max
22S03		Steel inserts, hardened, M3 Ø 0.3 - 1.2 mm	0.028	44,000
22S04		Steel inserts, hardened, M4 Ø 0.3 - 1.2 mm	0.028	44,000

Hose protection

enz® hose protection provides optimum protection for the hose's rubber or plastic coating against environmental influences.

Maintenance

Regular maintenance and cleaning the nozzles daily prevents interruptions in operations and extends the service life of the nozzles. enz® sells various tools and products that come in handy when doing so. Reamers should never be used for cleaning.
